Dear all,

Thank you very much for a fruitful meeting in Brussels on Monday. As I presented, we are about to put together an **IPV6 status report** that will reflect some countries' IPv6 policies, actions and activities. These examples will serve as best practice sharing, inspiration and awareness raising for those member states that are still in the initial stage of stimulating IPv6 accessibility. At Monday's meeting, many valuable points and cases were presented, some not familiar to us, and it is imperative that these can be shared among us and among Europe in order to spread the word that IPv6 is actually happening.

The IPv6 status report will be printed before summer, but is however a living document that will be updated regularly, hopefully with new examples and new countries joining as we go along.

We would like you to contribute with 1-3 pages, with the following structure:

**1. IPv4 to IPv6** (introduction)

The ICT "climate" in terms of broadband deployment, number of users and other valuable statistics.

**2. Where is IPv6 / On-going activities**

Projects, policy initiatives or private sector commitment if any. Public procurement initiatives or major websites using IPv6.

**3. Future actions**

What to expect.

We would also like to receive as a last point, a summary or short analysis on (pick the examples most relevant to you):

1. your country's potential (if any) to be an IPv6 leader, i.e. a country that take actions that others could follow
2. examples of activities or policies that have been proven successful that you would like to share with other member states
3. the need for cooperation and coordination at EU level, what could be helpful for you
4. what will happen with the IPv6 development after 2009 (perhaps a road map or time table)

The deadline for contributions is April 17th. Please do not hesitate to contact me should you have any questions.

Thank you very much for your cooperation. We look forward to hearing from you.

Best regards,

Marika Kaliff
